

Bee Check Quick Start Guide

CalAgPermits BeeWhere (<https://beewhere.calagpermits.org>) provides a portal for Growers and Pest Control Businesses to check for the presence of bees near an agricultural site prior to applying a pesticide. California Law requires a pesticide applicator (grower or business) to notify beekeepers at least 48 hours prior to the application of a pesticide labeled as toxic to bees to a blossoming plant. CalAgPermits BeeWhere offers **BeeCheck Reports** which provide beekeeper contact information to verified Growers and Pest Control Businesses so they can make their notifications and protect the nearby bee populations. Going beyond the minimum required by law, CalAgPermits BeeWhere also allows Pest Control Advisors to voluntarily check for the presence of bees when writing a recommendation.

What is BeeWhere?

A collaborative project bringing beekeepers and pesticide applicators together by tracking and safeguarding hive locations across California using innovative mapping tools.
